Automated Content Publishing Workflow

Status: Open

Project Description

This project focuses on building an automated content publishing workflow that streamlines how content is reviewed, approved, and published. The objective is to reduce manual effort while maintaining quality and consistency across published materials.

The workflow should support multiple stages such as draft, review, approval, and published states. Notifications should inform relevant users when actions are required. Audit logs should track changes and approvals for accountability.

Usability is a key consideration. The system should be easy to understand and integrate into existing editorial processes. Performance should remain stable even with large volumes of content.

Clear documentation must explain workflow configuration, user roles, and maintenance. The final system should improve efficiency and reduce publishing delays.
