Custom Reporting and Analytics Dashboard

Status: Open

Project Description

This project focuses on building a custom reporting and analytics dashboard that provides real-time and historical insights into platform performance. The objective is to enable stakeholders to make data-driven decisions using clear and interactive reports.

The dashboard should support multiple report types, filters, and export options. Data accuracy and consistency are critical, requiring reliable data aggregation and validation processes. Visual elements should be intuitive and designed to highlight key metrics effectively.

Performance optimization is essential to ensure that reports load quickly even with large datasets. The system should also support role-based access to restrict sensitive data visibility.

Documentation must explain data sources, report configuration, and maintenance procedures. The final solution should be extensible and adaptable to evolving reporting needs.
